Aster New Super Giant Los Angeles

New Wilt Resistant Strains of Asters

For several years the largest seed growers and the Department of Plant Pathology of the University of Wisconsin have been working on a strain of Asters resistant to the Fusarium wilt disease which has caused so much trouble to Aster growers. The plants may be stricken with the wilt at any stage in their growth, from the seedling to the flowering stage, and as yet no method of control has been discovered. We believe prevention through highly wilt-resistant strains is the method of combating the disease.

The following are wilt-resistant strains and are practically immune to this disease:

- Early Beauty Crimson Pkt. 15c
- Early Beauty Lavender Pkt. 15c
- Early Beauty White Pkt. 15c
- Early Beauty Carmine Rose Pkt. 15c

ASTER SUPER GIANT LOS ANGELES

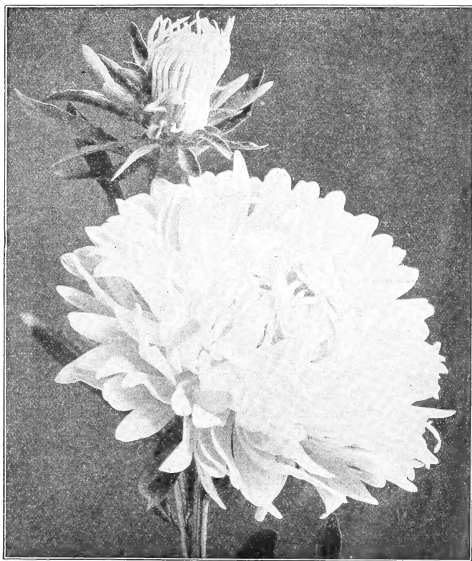

Aster Los Angeles is the first variety of this giant race, and how beautifully it upholds the romantic traditions of its namesake, the glamorous city of sunshine and flowers. The color is a serenely pure shell pink, in flowers which are full petaled, deep, and unusually large, yet artistically graceful in the feathery effect of the inter-lacing petals. Loosely arranged in a tall pouter vase the long stemmed flowers lend a feeling of quiet dignity to any decorative arrangement. In the annual border or cut flower bed in the garden, they stand majestically above their fellow asters, and show up to best advantage when combined with a planting of the Blue Lace Flower, *Didiscus*. Pkt., 35c.

ASTER GIANT MAMMOTH PAEONY FLOWERED SILVERY ROSE

This is a fine long-stemmed variety, of true Paeony flowered type with immense flowers of deep lavender pink, which darken as they age, leaving the tips silvery white. A striking new variety and a good addition to this type. Pkt., 25c.

Currie's Novelties and Specialties in Flower Seeds

ANTIRRHINUM MAJESTIC—

(*Super Giant Snapdragons*)

Majestic Antirrhinums are characterized by having the largest possible florets closely spaced in large spikes on a medium tall plant. The flowers are the largest of any type, with far better spacing than that found in any other type. They have been proven the best for both cut flower and border use and will, no doubt, supersede the other strains when a complete color range has been developed. So far, the colors run principally to the orange and terra cotta shades, which are, of course, favorites in Antirrhinums.

Majestic Eldorado Deep Golden Yellow Pkt. 15c

Majestic Golden Dawn Old Gold Overlaid Salmon Pkt. 15c

Majestic Sunset Bright Terra Cotta Shaded Rosy

Salmon Pkt. 15c

Majestic Red Chief. A beautiful deep scarlet Pkt. 15c

NEW ANTIRRHINUM MAJUS AUTUMN GLOW

Autumn Glow is a lovely new Snapdragon somewhat after the color tones of the popular Harmony, only much softer and more pleasing. Autumn Glow can be best described as a beautiful old rose, strongly shaded terra cotta, with a golden lip. The general color giving the effect of soft autumn tones. Pkt., 15c.

For other varieties Snapdragons see Page 11.

ARCTOTIS HYBRIDS

Another of the lovely flowers which have come to us lately from Africa. The hybrids come in a brilliant assortment of showy daisy-like flowers predominating in orange and bronzy red shades, but also comprising many lovely shades of rose, cream, yellow and salmon. In the milder climates they may be classed as a perennial, but in the northern latitudes they are better treated as an annual. They flower within six months from seed, and bloom profusely through the hot summer season. Pkt., 15c.

ARMERIA LAUCHEANA—(*Dwarf Thrift*)

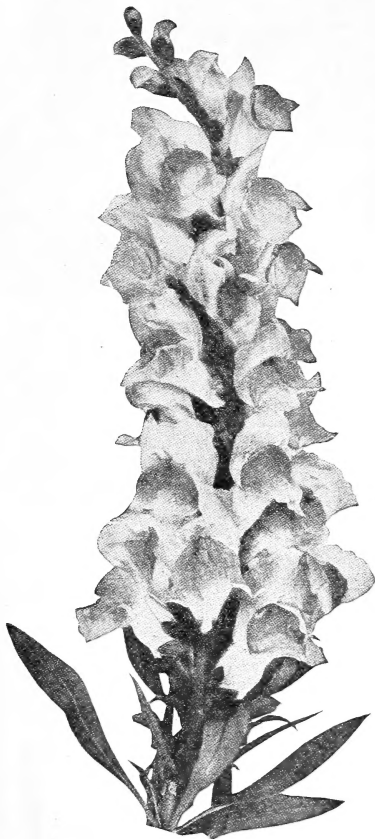

Most of us know the Giant Thrift, but we have not yet become so familiar with the dwarf strain. Laucheana is a very free flowering, dwarf variety, with medium sized flower heads of deep rose. They combine very nicely with Forget-me-nots in the rockery or dwarf border. Pkt., 10c.

AGERATUM BLUE CAP

Undoubtedly the best dwarf Ageratum, the flowers are much larger than Little Blue Star and of a deeper and richer color, it is very dwarf and compact in growth. The foliage is small and the plants have the appearance of miniature domes, just the thing for edging of flower borders. Pkt., 15c.

ANCHUSA ANNUAL BLUE BIRD

Plants grow about 18 inches high and bear its flowers in a luxuriant bouquet at the top of the plant and are of a vivid indigo blue and form a brilliant effect in any scheme for the decorations of beds or borders. Pkt., 15c.

CALENDULA CHRYSANTHA OR SUNSHINE

Chrysantha is a new Calendula which is outstanding among all varieties known up to the present time. Many improvements have been made on Calendulas, but no other origination can begin to compare with this lovely new-comer from far-off Australia. The large flowers are an exquisite shade of clear buttercup yellow, with long loosely arranged petals, which droop to give the rounded appearance found in our favorite Chrysanthemums. Besides adding a bright golden splash of color to the garden, Chrysantha is a fine cutting variety, with long stiff stems, well adapted to combine with other flowers, such as blue delphinium, in bowls or vases. Pkt., 20c.

NEW ANNUAL CANTERBURY BELLS

Many years of careful selection have at last given us an Annual Canterbury Bell which blooms from seed in less than six months. It should now be possible to have this beautiful flower in bloom at almost any time of the year. The plant grows from two to two and a half feet tall, each plant having from six to eight spikes of blooms. We offer this in mixture, containing the following colors: dark blue, light blue, pink, rose and white. Pkt., 25c.

NEW CANDYTUFT MINIATURE GEM

(HYACINTH FLOWERED TYPE). The result of years of selection has produced a dainty, small miniature hyacinth flowered Candytuft about three and a half inches high, each plant producing four to six spikes. A perfect Miniature Gem for the rock garden. Pkt., 15c.

ESCHSCHLOTZIA RAMONA—

(*Frilled California Poppies*)

Ramona type California Poppies are beautifully frilled and fluted, in the russet and pinkish shades, on neat growing plants which form a compact mass of flowers. They are very effective when used as a border or as a ground cover in the rose garden. Pkt., 10c.

DIANTHUS, SWEET WIVELSFIELD

This new annual is a hybrid, being a cross between Dianthus Alwoodi and Sweet William; seed started indoors in January and planted out in April will commence to flower in May, blossoming profusely all summer in a great variation of colors. Pkt., 15c; 50c per large pkt.

DIANTHUS "HIGHLAND QUEEN"

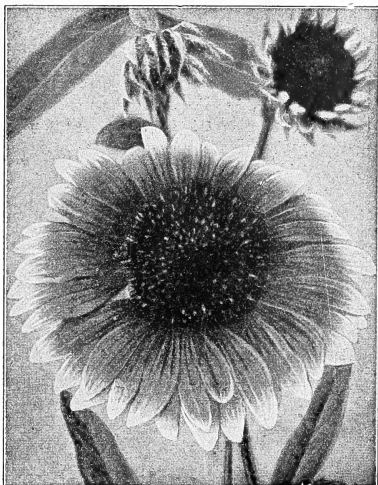

The most brilliant perennial Dianthus in cultivation, bearing in profusion flowers of a lustrous scarlet vermilion color, which captivates the beholder at first sight. It is extremely hardy, of vigorous growth, and ideal for bedding, borders and the rock garden, continuing in bloom, as it does, from the end of May until November. Pkt., 25c.

GALLIARDIA BURGUNDY

Burgundy is the darkest and most brilliant of all perennial galliardias. It is coppery scarlet self color, similar to Indian Chief in the annual varieties. If started early indoors, flowers may be produced the first season from seed, after which the plants will bloom profusely throughout the summer months. Pkt., 20c.

NEW LUPINUS HARTWEGH GIANTS MIXED

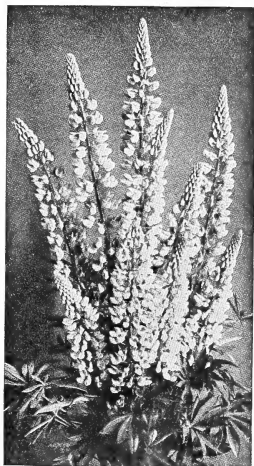

A new improved strain of Annual Lupinus. Hartwegi Giants are from three to four feet tall or one to one and a half feet taller than the Lupinus Hartwegii type. Hartwegi Giants have the base branching habit, with four to six long spikes to a plant. Each spike has from twenty-five to fifty more blooms than the Hartwegii type. The blooms are also a little larger. The leaves are about one and a half times as large, making a very handsome plant. Colors include dark blue, sky blue, rose and white. We feel confident that this new strain will increase the popularity of this fine Annual Lupine, so easily and quickly grown from seed. Pkt., 15c.

Gaillardia Burgundy

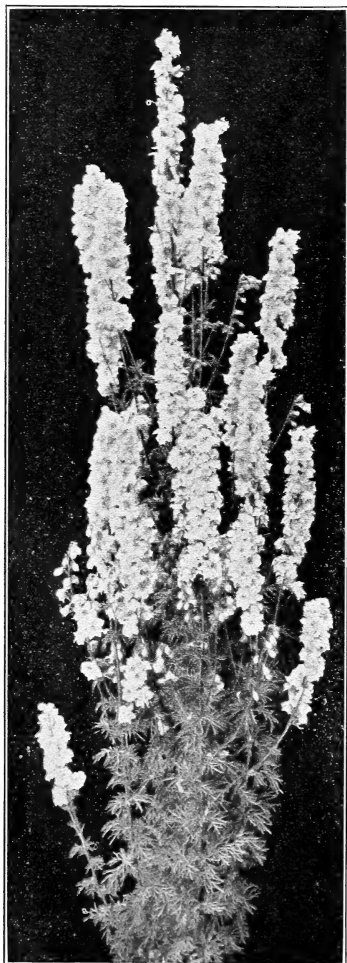

SAINTPAULIA—*African Violet*

IONANTHA—A splendid pot-plant of easy culture, producing a great profusion of deep blue flowers set against dark green, Gloxinia-like foliage. Blooms continuously and resembles a giant violet in many ways. Pkt. 50c.

Lupine

Currie's Novelties and Specialties in Flower Seeds

Larkspur Blue Bell

LEPTOSYNE STILLMANII

To many, this variety is entirely new. Although somewhat similar to Maritima, the Sea Dahlia, this variety is a much earlier flowering and dwarfer sort. The plants are covered with masses of the medium sized golden yellow daisy-like flowers over a long season of time. They are fine for borders or dwarf beds and for cutting, and are good subjects for forcing in the greenhouse. Pkt., 10c.

LARKSPUR GIANT IMPERIAL BLUE BELL

Blue Bell is a fine medium blue larkspur, deeper than sky blue, yet much lighter than lilac, a color up to this time lacking in the giant imperial type. The type is decidedly upright, with long basal branched flowering spikes, well adapted for cutting. Pkt., 20c.

LARKSPUR GIANT IMPERIAL LOS ANGELES IMPROVED

This is the same color as that popular stock flowered variety, Los Angeles, but in the vastly improved giant imperial type. It is the best of this type on the market. For greenhouse use, or where a tall, compact growing strain is wanted in the garden, this variety is preferable. The spikes are long and without side branches, making it an excellent kind for cutting. The color is a brilliant rose on salmon. Pkt., 20c.

PANSY ENGELMANN'S STRAINS

Nowhere are pansies more loved or better understood than in England, the home of Mr. Engelmann. In the Engelmann establishment an infinite amount of care is taken to produce nothing but the finest types of extra large pansies in a great variety of shades. The Special Strain is the old Scottish Show type, reselected to a strain of immense flowers, in the bronze and reddish shades. The Giant Strain has a wide range of colors, both dark and light. Both strains are compact and early flowering. Pkt., 50c.

MARIGOLD GUINEA GOLD

Guinea Gold!—bringing thoughts of Spanish doubloons and buried riches, a treasure chest for your garden!—and what a prize we have in this Marigold. Brighter than any treasure the pirates ever dreamed of, the masses of lovely blossoms cascade down the sides of the plant in a pyramid of flowing gold. Arranged in a jet black or cobalt blue bowl, Guinea Gold can scarcely be surpassed for decorative effect in any part of the house, especially as the characteristic marigold odor has almost entirely disappeared. Pkt., 15c.

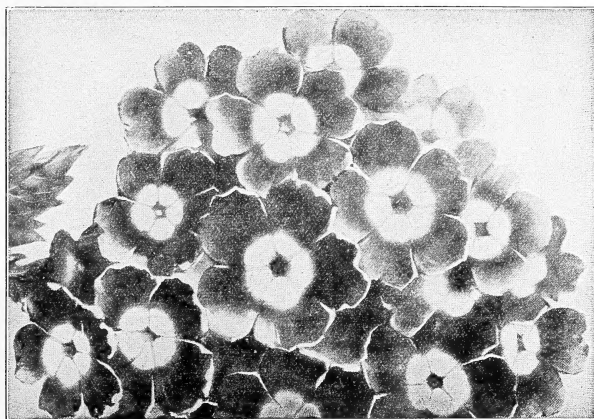

PETUNIA NANA COMPACTA PINK GEM

This is the first of a charming new race of miniature Petunias. It forms a neat compact plant five to six inches high, literally smothered with deep pink blooms. A plant eight inches in diameter will carry as many as twenty-five to thirty blossoms in flower at one time. Individual blooms are two inches in diameter. This miniature Petunia will be indispensable for borders, window boxes, pots, rock gardens and for bedding. Planted with a dwarf blue Ageratum, the effect is most charming. Pkt., 35c.

PETUNIA NANA COMPACTA MIXED

Introducing a new strain of Dwarf Compact Petunias. While there has always been in existence one or two varieties of Petunias that could be classed as Dwarf Compact, this is the first time that a complete mixture with a well balanced range of color has ever been offered in a Dwarf Compact Mixture. Each plant in this mixture forms a perfect ball effect from eight to ten inches high and about twelve inches in diameter. Each plant in this mixture is a perfect symmetrical specimen and represents the result of many years of careful selection through a group of colors representing deep rose, rose-pink, pink, pale pink, crimson, white, and striped effects in all these colors. As a mixture it is well balanced in all the colors and it has been highly praised by all visiting seedsmen. We strongly recommend this improved strain for use wherever Petunias are needed—in pots, window boxes, borders, beds, and they are even suitable for rock gardens. Pkt., 25c.

Verbena

VERBENA BEAUTY OF OXFORD HYBRIDS

For many years the non-seeding variety, Beauty of Oxford, has been a favorite Verbena. This new strain is the nearest approach in a seeding variety to the bright deep rose pink shade of Beauty of Oxford. The flowers are large and freely produced on plants which hold their shape well at all times. Pkt., 25c.

VERBENA HYBRIDA COMPACTA TYPE— *Edging Verbenas*

These are distinct from all other types of Verbena, very compact, dwarf, and free flowering. The color range is very wide, in bright shades. They are excellent for the annual rock garden in a sunny position, for borders or edgings, or for window boxes or pots. Pkt., 15c.

VERBENA ROYAL BOUQUET MIXED

As the name suggests, this type is excellent for cutting. The plants are definitely upright in habit, several 10 to 12 inch stalks to a plant, each bearing full clusters of the large starry eyed flowers at the tip. They are fine for pot culture, as well as cutting. The colors comprise a full range of the brighter shades. Pkt., 15c.

SCABIOSA CAUCASICA ISAAC HOUSE STRAIN—(*Blue Bonnets*)

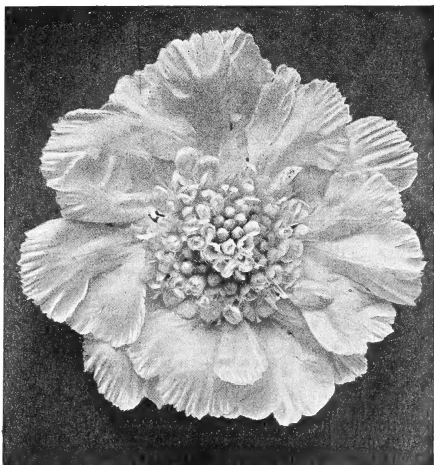

This is a very greatly improved strain over the ordinary scabiosa caucasica. The flowers are surprisingly large, gracefully fringed and ruffled, in shades of blue ranging from very dark shades through the midblues to lavender. During the hot months of June and July, when most flowers look rather wilted from the heat, these hybrids are unaffected by the temperature and make a fine showing in the garden, or for cut flower use. Pkt., 25c.

URSINIA ANETHOIDES

One of the most charming flowers we have received from the Cape. Like most all African natives, it likes a sunny place in the garden, and will bloom profusely all through the season. The flowers are daisylike, single, medium sized, in color brilliant orange with a deep purple center zone, remaining open till dusk. They are fine for cutting as well as in the garden. Pkt., 15c.

VENIDIUM FASTUOSUM— (*Monarch of the Veldt*)

Of all the flowers recently brought to us from the African Veldt, Venidium Fastuosum stands apart as the monarch of them all. It has all the qualities which makes it an all around favorite for gardens and cutting, and will soon be found in everybody's garden. It is easy to grow, likes plenty of sunshine and not too much water, is a very robust, fast grower, producing flowers within 90 days from seed, and keep on flowering until late in the summer. The flowers will keep a week or more in bouquets, the long stemmed huge daisy-like flowers making a delightful arrangement for any setting. Pkt., 25c.

Currie's Lawn Grass Seed

Produces a Rich, Thick, Velvety Lawn in SIX WEEKS

... A BEAUTIFUL LAWN AND HOW TO SECURE IT ...

It is universally conceded that nothing contributes so much to the beauty and attractiveness of the Home Grounds, the Park and the Cemetery, as a smooth, uniformly rich-green, well-kept lawn. But to be perfect and a pleasure to walk on this should have a firm yet elastic and carpet-like surface, and the first consideration in laying out or renovating old grounds should be to secure this condition.

CURRIE'S LAWN GRASS MIXTURES are the result of years of study and careful observation, and, if our directions are followed in seeding, they never fail to produce quickly a thrifty growth of fine, velvety, rich green grass, continuous in verdure from early spring to winter, and creating a springy, dense, carpet-like turf and permanently beautiful lawn.

THE QUANTITY OF SEED REQUIRED—There is no fixed rule, but a liberal sowing is always satisfactory, while a light seeding is a waste of time and usually disappointing. A beautiful lawn may be produced in a few weeks, or it may not approach perfection for two or more seasons, according to the quantity of Seed sown. When in a hurry for a fine, close turf, we have frequently sown at the rate of seven, or even eight, bushels of 20 lbs. to the acre, with the most gratifying results, but in general the following quantities will produce satisfactory results: 1 pound to 300 square feet; 5 pounds to 1,500 square feet; 30 pounds to 6,000 square feet; 150 pounds per acre.

In thickening up established lawns slightly smaller quantities, depending on conditions, may perhaps be sufficient, but it is always well to put on enough.

CURRIE'S SPECIAL LAWN GRASS MIXTURE

THOROUGHLY TESTED AND ANALYZED FOR GERMINATION AND PURITY

Composed of Evergreen Grasses, best suited to our American Climate, only the finest and cleanest grades of Seed being used. This splendid mixture is composed of only the finest dwarf-growing evergreen grasses; absolutely free from weed seeds or other impurities.

In comparing the cost of our Special Lawn Grass with other mixtures sent out by the trade, remember that the actual weight per measured bushel of our mixtures is 20 pounds or more, while that of most mixtures is only 14 pounds per bushel. To obtain this exceptionally heavy weight per bushel, we must and do use only the heaviest and best samples of the various grasses which compose our mixture. This is in itself a guarantee against sowing weed seeds, as the heavier the mixture the more thoroughly cleaned have been the component grasses. We do not use any cheap grasses that dies out during the winter and which has to be replaced with a permanent grass seed.

Price per lb., 40c; 5 lbs., \$1.90; 10 lbs., \$3.75; 20 lbs., \$7.25; 100 lbs., \$30.00.

LAKESIDE GRASS MIXTURE

This mixture is specially prepared for country homes where a close, even velvety turf is not easily secured, owing to the difficulty of watering, etc., so necessary for the maintenance of a perfect lawn. The grasses used are such as endure drought and rough usage to a remarkable degree.

We have made up this mixture in a great measure for the formation of lawns at Lakeside Summer Homes that can only have attention during the summer months, and for this purpose it will be found invaluable.

1 lb., 35c; 5 lbs., \$1.50; 10 lbs., \$2.85; 100 lbs., \$27.50.

CURRIE'S PARK MIXTURE

This is composed of quick growing grasses and is used where a lawn is wanted in a hurry, and should be reseeded with our Special Mixture which is composed of the finest of permanent grasses. 1 lb., 25c; 5 lbs., \$1.15.

Grass Mixture for Shady Places

Lawn Grass Mixture for Shady Places

If wanted by mail, add for postage at zone rates.

To maintain a nice growth of grass under trees and in places where the sunlight only reaches part of the day, was long considered almost hopeless. This can now be overcome in a great measure by our mixture, which is composed of dwarf, compact growing grasses that naturally grow in partial shade and will maintain a close, thick turf throughout the entire season. It frequently happens that the ground under trees becomes impoverished by the roots of the trees, making it almost impossible for grass to thrive unless a liberal top dressing of fertilizer is supplied, or when the ground has soured and covered with moss an application of ground lime will be found beneficial before sowing the seed.

½ lb., 25c; 1 lb., 45c; 2½ lbs., \$1.15; 5 lbs., \$2.00; 10 lbs., \$3.90; 20 lbs., \$7.75; 50 lbs., \$19.00; 100 lbs., \$36.00.

GRASS MIXTURE FOR TERRACES

—This mixture is made up of fine dwarf growing grasses, with strong creeping and fibrous roots that form a compact growth of turf, resisting drought and exposure remarkably well, and when established, prevents washing.

1 lb., 50c; 5 lbs., \$2.30; 10 lbs., \$4.50; 20 lbs., \$8.90; 100 lbs., \$41.00.

CURRIE'S FAIRWAY MIXTURE—

Golf courses all over the country are demanding better fairways. We made up this mixture to meet this demand. This makes an excellent turf in a very short time, and is indeed a pleasure to walk over it. This will also make a fine lawn, but does not contain any white clover. Sow at the rate of 150 lbs. to the acre.

Price per lb., 40c; 10 lbs., \$3.75.

GOLF COURSE MIXTURE—Forms a close turf that bears hard usage and remains green throughout the season.

Per lb., 40c; 5 lbs., \$1.90; 10 lbs., \$3.75; 20 lbs., \$7.25; 50 lbs., \$16.00; 100 lbs., \$30.00.

GOLF MIXTURE FOR PUTTING GREEN—

A mixture of dwarf, compact growing fine leaved grasses that withstand constant wear.

Per lb., \$1.00; 5 lbs., \$4.75; 10 lbs., \$9.40; 20 lbs., \$18.50; 100 lbs., \$85.00.

WHITE CLOVER—Extra choice re-cleaned seed for lawns.

½ lb., 35c; 1 lb., 65c; 5 lbs., \$2.85.

KENTUCKY BLUE GRASS—The most valuable and permanent lawn grass. Very slow in getting started and becoming established. Where a quick growth is desired, it is best to use "Currie's Special Lawn Mixture," which has in addition to Kentucky Blue, other excellent lawn grasses that will make a sod the first year, while the Blue Grass is establishing itself.

Price, 1 lb., 40c; 5 lbs., \$1.90; 10 lbs., \$3.75.

SELECT LIST OF HAY AND PASTURE GRASS MIXTURES

FOR SPRING AND FALL SOWING

Where a field is to be put down to grass for a number of years, a mixture of grasses that are more permanent than Timothy and Clover should be used, such as will produce good crops of hay and pasture for many years without reseeding.

We prepare mixtures of grasses for a wide range of soils and conditions, and there is hardly any land so poor or climate so unfavorable that we cannot furnish a mixture for it that will yield one or more crops of hay every year.

The first cost of seeding with these mixtures is generally more than Timothy and Clover, but the returns fully warrant the extra expense.

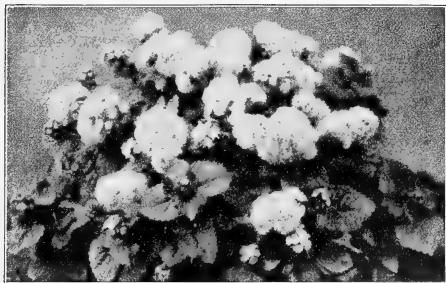

Only the best re-cleaned grass seeds are used by us in these mixtures, and if the soil and conditions are described, the proper proportions will be used to produce satisfactory results.

Sow 25 lbs. to the acre. Price, 25 lbs., \$4.50; 100 lbs., \$17.50.

Aster Giant California Sunshine Mixed

ASTER GIANT CALIFORNIA SUNSHINE MIXED

The color in these new Asters is startlingly beautiful. A dual-tone effect is obtained through the contrasting tints of the disc-like center and the outer or guard petals. Gracefulness of form is a distinguishing characteristic. The full centers of tubular, bifurcate petals surround the center, creating an airy, lace-like effect, which is altogether charming. In color, the flowers may be described as varying shades of Enchantress-pink, Appleblossom, Deep-rose, Blue and Lavender, but the disc, sometimes light yellow, sometimes blue, brings additional variety in tint. A bouquet comprising the complete ensemble of shades, presents delicate gradations of color as well as startling color contrasts which enchant the eye of the beholder.

NICOTINE KEEPS DOGS AWAY

Spraying plants with diluted nicotine sulphate will cause cats and dogs to avoid them according to the U. S. Department of Agriculture. This spray seems to be very offensive to animals and should be used especially on evergreens at all seasons of the year when dogs are liable to cause injury. No doubt nicotine dust will give the same results.

SALPIGLOSSIS vs PETUNIAS

Of all the annuals I suppose the Petunia ranks first in popularity, but I greatly prefer the salpiglossis.

Last season my bed of sallies stood three feet high, and furnished beautiful cut flowers all summer. One plant alone produces ten dozen blossoms.

When cut and kept in water, the blooms last a long while, and a bowl arrangement as a table centerpiece is extremely attractive. They are far superior to the petunia as a cut flower.

I sow seed inside in March, prick the seedlings into flats, as soon as they are large enough to handle, and transplant to their beds outside about May 20th.

DIANTHUS GARDEN PINKS

For beauty and profusion of bloom, few plants equal the Pinks. The plants flower continuously all summer. Sow in the open ground early in spring.

DIANTHUS SWEET WIVELSFIELD

A new, hardy annual, good for borders, as a cut flower and especially adapted for rock gardens Pkt. 15c

GAILLARDIA

The gorgeous colors produced by Gaillardias make these flowers particularly valuable for garden decoration. They show conspicuously in borders, where the plants will remain in bloom for a long period and the flowers afford charming tints for color schemes. As cut flowers, Gaillardias are extremely popular for the bold decoration of bowls and vases, for which purpose they should be widely grown. All the varieties offered below are, strictly speaking, perennials, but with the exception of the four varieties first named, they are much better when treated as half-hardy annuals.

Sweet Peas

Beautiful, Fragrant, Fashionable

HOW TO GROW THEM—Sweet Peas should be planted as early in spring as the ground can be worked. Rich loam with an abundance of well rotted manure is an ideal soil. A trench about 6 inches deep should be made, sowing the seed thinly in the bottom, and cover with an inch of soil, pressing it down firmly. Gradually fill in the trench as the plants grow, and thin out to 2 to 4 inches apart. When too close they make a weak growth with inferior flowers. Brush or wire netting should be placed in the rows as soon as the plants appear above the ground. During dry weather, water thoroughly and stir the surface soil frequently to prevent evaporation. Keep the flowers cut and never allow seed pods to form, as that at once ends the flowering season.

Late fall planting of Sweet Peas is practical, and is best done just before the ground freezes up, sowing the seed about 3 inches deep, covering the rows with manure or leaves after the ground is frozen.

ARTICHOKE

The Globe Artichoke bears large, round heads with thick, fleshy scales, which are cooked and served like Asparagus. Sow the seed early in March and transplant when warm in rows four feet apart and two feet in the rows. Cut the tops off in winter and protect with a heavy covering of straw or leaves. The first season will only yield a partial crop. The second year, thin the shoots to three of the best, and these will begin to form

heads early in summer.

Another use is to cut back the stems close to the ground early in summer. The young shoots which start up rapidly may be tied close together, filling in between with soil to exclude the air until they are blanched, and these are used in various forms of cookery or as a salad. **LARGE GREEN GLOBE**—Pkt., 10c; oz., 75c.

ASPARAGUS

Asparagus may be grown in almost any soil, and under nearly all conditions, but succeeds best in a rich, sandy friable loam with good under drainage, and yet not

too dry. Avoid planting near trees or tall shrubs, because of the shade and heavy draft on the fertility of the ground. Choose an open space with a southern exposure.

Brussels Sprouts

BRUSSELS SPROUTS

Sow seed in June and cultivate the same as cabbage. The miniature cabbage-like heads are borne at the axles of the leaves. The leaves should be broken off in fall to give the sprouts room to grow. They are delicious when cooked late in fall or winter.

Italian Broccoli

ITALIAN GREEN SPROUTING BROCCOLI

A new and distinct variety of the popular branching type. The plant grows about two feet high, is branching, each branch terminating in a green sprout. When the green sprouts which are actually a mass of flowers have developed to two or three inches across—and before the flowers appear—they are ready for use. This splendid vegetable seems to thrive anywhere. It has the combined flavor of cauliflower and asparagus, and is cooked and served the same as cauliflower.

For an early crop sow the seed in a cold frame and transplant the seedlings in the open ground when danger of frost is past. For a later crop, sow the seed in the open ground in May and the sprouts will be ready for use in August. Pkt., 15c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.75.

BROCCOLI (*Winter Cauliflower*)

SNOW'S WHITE—Forms large creamy white heads of excellent quality. Pkt., 10c; oz., 50c; ¼ lb., \$1.50.

SWISS CHARD or SPINACH BEET

If given a little protection, it will survive the winter and make excellent greens early in the spring. One ounce will sow 100 feet of drill.

Beans

Wax or Yellow-Podded Varieties

Culture—Begin sowing Dwarf or Bush varieties the first week in May, if the ground is in fit condition. For successive crops sowings may be made every two or three weeks until the 15th of July. Mature in 45 to 65 days. Sow thinly in drills 2 or 3 inches deep and from 18 in. to 2 feet apart. If the soil is rather poor, the former depth will suffice. If rich, the latter. Never cultivate beans while the foliage is wet or covered with dew, because the bean-spot or anthracnose will spread very rapidly if carried on the clothing or hoe, with detrimental effect to the crop. Beans should be picked daily in order to have them tender and stringless.

(120 lbs. to the acre in drills.)

CURRIE'S ECLIPSE—The earliest of all large Cabbages. It is considerably larger than Early Summer and fully two weeks earlier. The heads grow very uniform in size, with few loose leaves, remarkably solid, very tender, and of the finest quality. The veins and mid-ribs of the leaves are much smaller than that can be desired as an early Cabbage, and a valuable sort for main crop. The stem is very short. Pkt., 10c; $\frac{1}{2}$ oz., 20c; 1 oz., 35c; $\frac{1}{4}$ lb., \$1.00; 1 lb., \$3.00.

CURRIE'S EARLY MARKET—An excellent pointed head cabbage. Comparing it with Jersey Wakefield, we find it earlier, besides having a much larger and finer head with few loose outside leaves. In form the head is conical. This Danish production is highly praised by all who have grown it. For home use its fine quality and tenderness will be greatly appreciated. It has no coarse veins and leaves, and also has the quality of some of the best sorts of hardening the head before it has attained its full size. Pkt., 10c; 1 oz., 35c; $\frac{1}{4}$ lb., \$1.00; 1 lb., \$3.00.

Carrot

CULTURE—For the successful cultivation of this root the soil should be light (sandy loam is best, enriched the previous year with manure) and deeply tilled. For an early crop the seed should be sown as early as the ground can be properly worked. For later crops it may be sown any time until about the middle of June. Be careful to compress the soil over the seed after sowing. Sow in rows about 15 inches apart, or for field culture 1½ to 2 feet apart, covering the seed about one-half to one inch deep. Keep down weeds. Thin out young plants as soon as they can be handled, leaving them about 4 inches apart. 1 oz. 100 feet of drill; 3 to 4 lbs. per acre in drills.

CURRIE'S IMPROVED MILWAUKEE MARKET

In shape, color and general appearance this sort is an improvement on the well-known Danvers. It is broad at the neck and gradually narrows down to a blunt, pointer base. In color, it is an attractive bright orange. The flesh is tender and sweet throughout, and is entirely free from core. It is one of the heaviest croppers and its handsome appearance makes it an excellent bunching Carrot for market. Pkt., 10c; 1 oz., 25c; ¼ lb., 75c; 1 lb., \$2.50.

CHANTENAY IMPROVED

The market gardener's and trucker's favorite. It is an early, very productive, half-long, stump-rooted variety, smooth-skinned, fine in appearance and entirely coreless. The shoulder is unusually thick and the root tapers slightly down towards the blunt point so that it is pulled very easily. The color is a rich orange and the texture and quality are unsurpassed. For table use many regard this variety—because of its form, color, texture and delicate flavor—the finest of all sorts, and it is undoubtedly the best bunching Carrot for early market use. Pkt., 5c; 1 oz., 20c; ¼ lb., 50c; 1 lb., \$1.25; 5 lbs., \$5.50.

Cauliflower

Early Snowball Cauliflower

CURRIE'S DANISH MARKET CAULIFLOWER

"DRY WEATHER"—Extra Selected Comes in about three weeks later than our Selected Early Snowball. Heads larger and firmer.

Our stock of this grand Cauliflower cannot be surpassed. For packers and pickle growers it has no equal, yielding, as it does, immense, solid heads, many of which weigh over ten pounds each of solid flower.

Every plant produces a head, many of them so large that three fill a bushel basket and all perfectly solid. As the name "Dry Weather" implies, this variety possesses to a marked degree the ability to resist without deterioration extremely droughty conditions such as have been experienced during recent seasons. Because of this constitutional hardness many growers, especially those in the drier, hotter sections, pin their faith to this fine sort as against all other varieties. Pkt., 15c; ¼ oz., 80c; ½ oz., \$1.45; 1 oz., \$2.50; 2 ozs., \$3.75; ¼ lb., \$7.50; 1 lb., \$25.00.

EXTRA EARLY SNOWBALL or DANISH PERFECTION

The leaves, very closely enfolding the head, give it a particularly attractive appearance when displayed for sale, and as the inner leaves almost cover the snow-white flower, the necessity of early tying up as in the case of other early sorts is largely avoided. It is the earliest strain of its type and recommended for extra early marketing. Pkt., 25c; ¼ oz., \$1.00; ½ oz., \$1.75; 1 oz., \$3.00; 2 ozs., \$4.75; ¼ lb., \$9.00; 1 lb., \$34.00.

"CAULIFLOWER AND BROCCOLI CULTURE"—By A. G. B. Bouquet. Soil, climate, requirements, plant growing, pest control, marketing, yields and values, costs, varieties and seed growing. \$1.25.

CULTURE—The Seed for early planting should be sown in February or March in a hot-bed, transplanting the plants when large enough into another or the same frame, and gradually hardening them off, preparatory to planting them out as early as the ground is in a fit condition. For late planting the Seed should be sown in May in a cold frame or open ground in soil that is well pulverized. Any good garden soil made rich by manuring, will suit. When the heads begin to form the leaves should be tied together to prevent the flowers becoming sunburnt and tough. In order to have them tender and of good flavor they must be gathered before they become too large. 1 oz. for about 3,000 plants. Set in rows 2½ feet apart and 1½ feet in the row. 3 to 4 oz. to the acre.

Our Cauliflower Seed is grown in Denmark and is the best that can be procured.

EARLY SNOWBALL

Extra Selected

It is of dwarf, compact habit, heads very large and pure white. Pkt., 15c; ¼ oz., 80c; ½ oz., \$1.45; 1 oz., \$2.50; 2 ozs., \$3.75; ¼ lb., \$7.50; 1 lb., \$25.00.

Celery

One ounce will furnish 3,000 to 5,000 plants

Celery is a crop that requires a very long season. If an early crop is to be grown from seeds, the latter must be started indoors in boxes about the last of February, the plants being set in the ground, six inches apart, in May. The crop should be ready in August. Celery for winter may be grown from seeds started in the open ground in late April, but it is advisable to have a seed bed and to transplant the seedlings to the open field when large enough. It is well to cut off the lower half of the roots at transplanting time, and firming the soil around the plants is very important.

Ailsa Craig Onion

ONIONS

CULTURE—The Onion is most successfully grown in a deep, rich loamy soil, and, unlike most vegetables, does best when cultivated in the same ground for a succession of years. Manure the ground well in the fall, and turn up in ridges, during the winter, and as early as it will work in the spring rake or harrow thoroughly so as to get the soil fine and level. Sow thinly in drills half an inch deep, rows twelve inches apart, and cover with fine soil, pressing it down. Keep the ground free from weeds and thin out the young plants so they may stand three or four inches apart. The small onions pulled may be eaten green and the balance allowed to mature. 1 oz. to 100 feet of drill; 4 to 5 lbs. to the acre.

CURRIE'S EXTRA YELLOW GLOBE DANVERS

It is a true globe shape with very small neck; slightly flattened at the root end. Pkt., 10c; 1 oz., 25c; $\frac{1}{4}$ lb., 75c; 1 lb., \$2.25. By express 5 lbs., \$9.50.

CURRIE'S PRIZETAKER—Our pure American-grown stock is large and handsome. The skin is rich golden, while the flesh is white, and so mild and sweet that it may be eaten raw like an apple. Pkt., 10c; 1 oz., 25c; $\frac{1}{4}$ lb., 65c; 1 lb., \$2.00.

Garden Peas

Two pounds to 100 feet of drill; 120 lbs. to the acre in drills.

Sow the Extra Early round seeded varieties as early in the spring as the ground can be worked, and the wrinkled sorts later, when the ground is warmer, as they root readily in cold, wet soil early in the season. Sowings should be made at intervals until the end of May. Discontinue sowing until August, as Peas suffer very much during the hot summer months, after which the early kinds may be planted with good results.

Varieties marked * are wrinkled.

The price of peas up to 2 lbs. includes delivery by parcel post or express. Five pound prices and over do not include transportation. See zone rates.

Currie's Select Tomato Seed

CULTURE—Sow the seed in a hot-bed the first week in March, in drills half an inch deep. When the plants are about two inches high, transplant into another hot-bed or into small pots, one in each pot; in that way the plants are strengthened and branch out better. Set the plants out about the first of June, about three feet apart, for early crop, mixing a shovelful of well-rotted manure in each hill. For late crops, or where the soil

is heavy, plant four feet apart. Water freely when transplanting, setting the plant deep, and protect from the sun for a few days until the plants are fairly started. A few plants may be raised by sowing seed in a pot or a box in the house. Where only a few plants are grown, the vines may be trained to a single stem, removing all suckers, thus inducing earliness and superiority of fruit. 1 oz. to 1,500 plants, $\frac{1}{4}$ lb. for transplanting on an acre.

MANGEL-WURZEL AND SUGAR BEET

Sow early in spring in deep, rich soil, in rows 18 to 24 inches apart.

5 lbs. to the acre in drills 2 feet apart. Thin out to 9 inches apart in the row.

For feeding stock, few crops equal Mangel-Wurzel and Sugar Beets. Canadian farmers appear to appreciate this more than we do. The roots are stored in barns or pits before hard frosts sets in and fed during the winter months.

The Giant Half-Sugar Beets are much more productive than the Sugar Beets and fully equal to the best of them in feeding qualities. A large portion of the root being above ground renders them easy to handle. Every stockman should give them a trial.

Mangel-Wurzel are also very nutritious and yield very heavy crops, often exceeding 1,500 bushels to the acre. It is not unusual to grow roots weighing upward of 20 lbs. each on fairly rich soil.

Prepare the ground thoroughly, using a liberal supply of barnyard manure, previous to sowing the seed.

SEMESAN, JR.—The original organic mercury dust disinfectant—is used for control of Diplodia, Gibberella, and Basidiosporium root-rots carried by seed field and sweet corn; also for prevention of seed rotting of early planted corn. Semesan Jr. is easily and quickly applied; is harmless to the seed; and does not materially slow up the rate of planter drop, or prevent planting. It cost less than 3 cents an acre for the treatment of field corn. Per 4 oz., 50c; 1.50 per lb.; 5 lbs., \$7.00; \$28.75 per 25 lbs.; 100 lbs., \$110.00.

Currie's Alfalfa

LUCERNE

Prices subject to market changes without notice.

The great value of Alfalfa to the stockman cannot be over-estimated. No other forage crop combines so many excellent feeding qualities. The fact that three or four heavy crops of it can be cut every season should alone be an incentive to every farmer to put down at least a few acres of it. Alfalfa can be grown successfully in every state in the Union; the soil, however, should be deep and well drained. It will not succeed on heavy, sticky clay ground, or where water stands a short distance below the surface. Before sowing the seed see that the ground is well prepared by being thoroughly pulverized. Any extra work put on the ground at this time will be well repaid in the crop. If sown in spring, wait until the ground is warm, sowing from 20 to 30 lbs. of seed to the acre.

GRIMM'S CERTIFIED ALFALFA—Choice re-cleaned seed. Per lb., 35c; 10 lbs., \$3.00; 100 lbs., \$25.00.

Alfalfa Seed is shipped in Seamless Bags. When

the crop should be cut for hay just as it is coming into bloom. A safe guide is to watch for the starting of the new basil shoots, which form the growth of the next crop, before cutting. If the weather is fine the morning's cuttings should be raked into windrows the same afternoon, and cocked the following day.

We recommend using Northern grown seed. The U. S. Department of Agriculture in its investigation finds that the farther north the seed is grown the harder it is likely to be, and to meet these requirements we have secured a stock of strictly pure, re-cleaned Northern-grown seed.

EXTRA CHOICE HARDY NORTHWESTERN AND MONTANA GROWN RE-CLEANED SEED—Per lb., 30c; 10 lbs., \$2.50; 100 lbs., \$20.00.

**NEW DOUBLE SWEET SCENTED
NASTURTIUM (*Golden Gleam*)**

This grand, new double variety was offered last year for the first time. The plant forms a vigorous, large bush which throws out short runners, averaging eighteen inches. The large, golden-yellow sweet scented, semi-double flowers average two and one-half to three inches across. They are borne on erect, stiff stems six inches in length.

When well grown, these flowers have the appearance of a fully double flower, and are most attractive. An ordinary sized bouquet, when allowed to remain in a room for a short period of time, will fill the room with fragrance. $\frac{1}{2}$ oz., 25c Pkt. 15c
